

JavaScript Code Documentation

Overview

This document provides an overview of a JavaScript application used for simple arithmetic operations.

Main Components

1. **Main Script**:

- A JavaScript function that adds two numbers.

2. **Functions**:

- `addNumbers()`: Takes two arguments and returns their sum.
- `helperFunction()`: Aids in formatting the output.

Code Walkthrough

```
```\njavascript
```

```
function addNumbers(a, b) {\n return helperFunction(a + b);\n}
```

```
function helperFunction(result) {\n return `The result is: ${result}`;\n}
```

```
console.log(addNumbers(5, 3));
```

```
...
```

This code performs basic addition and formats the output string.
